

Objective: A mobile application that is easy and free for your workforce to download. Employees can use the app to share their Concussion, vaccination and testing information with their employer. The dashboard gives an instant vaccination and testing overview of your organization.

Business Challenge

- Managing all of the COVID information using Microsoft Share point is tedious task.
- It was a highly manual process, where people could upload their certificates and results into a folder with strict protocols.

Solution Offered

- Implemented dynamic charts and reports for impactful data visualization.
- Ensured secure user access and authentication to protect user data.
- Established smooth backend connectivity and integrated real-time notifications.
- Implemented email communication for efficient messaging.

Outcome

- Reduced manual effort for data entry and validation. Employees can focus on more critical tasks.
- Automation and validation workflows improve data accuracy. Strict access control and data encryption enhance the security
